

EndPath

The **EndPath** function closes a path bracket and selects the path defined by the bracket into the specified device context.

```
BOOL EndPath(  
    HDC hdc        // handle of device context  
);
```

Parameters

hdc

Identifies the device context into which the new path is selected.

Return Value

If the function succeeds, the return value is TRUE.

If the function fails, the return value is FALSE. To get extended error information, call [GetLastError](#). **GetLastError** may return one of the following error codes:

ERROR_CAN_NOT_COMPLETE
ERROR_INVALID_PARAMETER
